

## Martian Time

Water : Water is made up of three atoms, 2 are hydrogen atoms and one is oxygen atoms. When these atoms are attached to each other water is created. Water has three different states that it can be in a solid state, a gaseous state as well as a liquid state. Water has no taste other than the minerals that are present where the water is located. Water from the liquid state can turn gaseous state in the form of clouds which then turn into waters liquid form. Water be gai
